

Recorder Release Notes

Version 1.0.55

First public Release

Version 1.0.90

Recorder Runtime

- Update to Falcon 5.7.4
- Added Option “Removable Drive”: buffer in RAM, write when available again
- Improved handling when writing to trace file fails also if “Removable Drive” is not set
- When installed as service, log files are now by default in %commonappdata%
- Added output to Syslog

Recorder UI

- Source configuration: More useful display in “Connection” column
- Install Service now also works if the configuration file path contains spaces
- Filter Editor: Fixed construction of boolean and range conditions
- New ConsistencyChecker Plugin
- Decryption of DataSecureMessage can now be done at any stage in the pipeline (Record, Convert, Analyze)
- Added Export to Database (for now: SqlServer CE, MySQL/MariaDB)
- Analysis: Column selection

Version 1.0.95

Recorder UI

- Analysis: Search function
- Analysis: Bookmarks
- Analysis: Quick filters (right click on cell) now available for all columns
- Analysis: Display filtered/total number of events
- Analysis: Offer last used meta data in dropdown
- Analysis: HopCount column (hidden by default)
- Analysis/Filter: Allow to specify number of events to be displayed before and after a match
- Convert: Convert from/to analysis window content
- Convert: Support having the same file as input and output

Core functionality

- Filter Syntax: Allow to specify date/time literals as strings
- Filter Syntax: New “contains” operator for strings and lists
- Events can now be tagged with a list of arbitrary strings

Version 1.0.98

Recorder UI

- Recorder version display on start
- Analysis: by default, display of the columns “source name” and “destination name”

Version 1.0.100

- Info: Possibility to reinstall a RECORDER_RUN license

Version 1.0.102

Recorder UI

- Analysis: Fixed a crash with DPT 16, 24 or 28 (string values)

Version 1.2.1

General

- Update to .NET 8
- Licensing: optional license on WibuKey Dongle

Recorder Runtime

- Path to license and settings files can be supplied on command line
- Update to Falcon 6.1.x
- Update to modern FTP and SMTP clients
- RF Multi support

Recorder UI

- Conversion: Removed SQLCe support, added SQLite instead
- Analysis: Access to Additional Information fields (e.g. for RF)
- Analysis: Dissection of non-group messages
- Analysis: Support password-protected ETS6 projects
- New Option “Live recording”
- New Column “RF Info”
- Various minor bug fixes and improvements
